General Description

The GS3001 is low on-resistance (0.8Ω), fast single-pole double-throw (SPDT) CMOS switch with operation range +1.8V ~ +5.5V. The GS3001 is designed for low operating voltage, high current switching of signal gating, chopping, modulation or demodulation (modem), and speaker output for cell phone applications.

The device contains a break-before-make (BBM) feature. The control input, IN, tolerates input drive signals up to 5.5V, independent of supply voltage.

All devices are specified for the temperature range of -40℃ to +125℃.The GS3001 single is available in Green SC70-6 and SOT23-6 packages.

Applications

- Battery-Operated Equipment
- Wearable Devices
- Computer Peripherals
- Portable Systems

Note: Stress greater than those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions outside those indicated in the operational sections of this specification are not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
